### **DETAILED ACTION**

This application is a divisional of 09/527,522 now US Patent 6,413,752.

The preliminary amendment filed concurrently with the application on February 7, 2002 amending the specification to insert the cross-reference to the prior application and canceling claims 1-4 has been entered.

Claims 5-22 are pending.

### ***Election/Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 5-16, drawn to a gene encoding the transaminase, a vector containing it and a cell transformed with the same and a method of use of said cell, classified in class 435, subclass 193.
- II. Claims 17-20, drawn to a method of use of a transaminase to synthesize an amino compound represented by Formula (3), classified in class 435, subclass 128.
- III. Claims 21-22, drawn to a method for improving the ratio of an amino compound represented by Formula (9), classified in class 435, subclass 128.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1652

Inventions I and II-III are patentably distinct because a DNA and an enzyme used in inventions II-III are different compounds each with its own chemical structure and function, and they have different utilities. A DNA molecule of invention I can be used for the production of an enzyme used in processes of inventions II-III and as a hybridization probe. A transaminase used in processes of inventions II-III can be obtained by a materially different method such as by the biochemical purification. Further, a transaminase can be used in methods of either invention II or invention III and for the production of an antibody, for example.

The inventions of Groups II and III are patentably distinct because they are drawn to materially different processes of synthesizing different chemical compounds and they employ different starting products and have different effects. Furthermore, the amino compounds synthesized by methods of inventions II-III can be synthesized chemically.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their divergent subject matter, fall into different statutory classes of invention, and are separately classified and searched, restriction for examination purposes as indicated is proper.

Art Unit: 1652

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
